OZDW-600 machine tool for oblique corner notch cuts

View of internal wall connection without remains.

The machine tool is designed for cutting oblique corner notches in round logs with flat cut based and in rectangular logs. This type of notch is characterized by its high tightness and the precise joint positioning. The machine tool cuts the notches with use of saws. This reduces the energy demand, when compared to milling operation. Average notch cutting time is 3 minutes.

## Technical data:

| Length | $3 \mathrm{~m}(27)$ |
| :--- | :--- |
| Width | $4,4 \mathrm{~m}$ |
| Height | $3,2 \mathrm{~m}$ |
| Installed power | $4,5 \mathrm{~kW}$ |
| Max. momentary power demand | 25 kW |
| Max. log height | 300 mm |
| Max. log width | 600 mm |
